

# NoZZoff

**Combats mosquito larvae and pupae**  
**Environmentally friendly larvicide**

Does not significantly change water values: temperature, pH and dissolved oxygen

Does not contain insecticidal or larvicidal active substances

Does not affect the natural conditions necessary for the survival of existing aquatic fauna

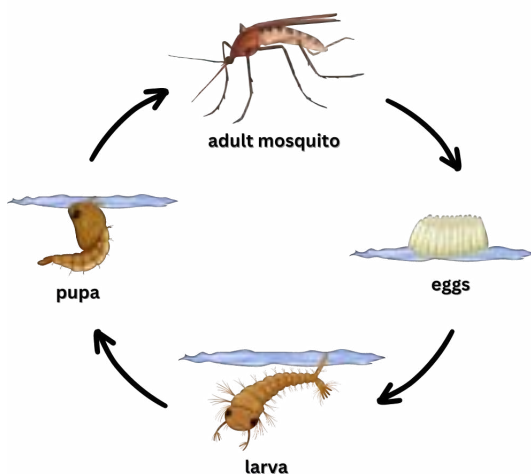

Effective for at least 4 weeks, guarantees larvae control in the first 5 days

Does not contain silicone

## Targeted pests

- Mosquito larvae and pupae (especially *Culex pipiens* and *Aedes albopictus*).

## Mode of action

- Physical-mechanical action;
- Prevents female mosquitoes from laying their eggs on the water surface;
- Prevents larvae and pupae from breathing.

## Usage Area

- Pot dishes, troughs, water tanks (up to 4 weeks);
- Sewers, drains, septic tanks (1 - 2 weeks).

## Instructions

NoZZoff is applied undiluted using a sprayer suitable for the viscosity of the product.

It is recommended to use nozzles with a large spray orifice.

You can apply the larvicide directly from the bottle using a measuring device.

### Recommended application doses

<b>1 - 5 ml/m<sup>2</sup></b> (of stagnant water surface)	in case of <b>smaller outbreaks</b> (pot saucers, buckets, tires)
<b>10 - 20 ml</b>	in <b>heavily infested</b> gutters, water tanks, drains, sewers and septic tanks

- Repeat treatment in case of rain.
- The product can be applied directly and no special equipment or protective equipment for operators is required.
